

research partner of
Cornell University
College of Veterinary Medicine

The Official Dog DNA Test of the
Westminster Kennel Club Dog Show

Embark Partnerships for Breed Organizations

Traditionally, DNA testing and targeted research have been performed separately. Embark combines these processes; providing individual results and expediting new breed-specific discoveries while saving time and resources.

As a partner, you receive:

Discounted Pricing:

Members enjoy reduced testing costs and support research at no additional cost

State of the Breed Reports:

Includes frequency of disease mutations, traits, and overall breed diversity assessments

Research Projects Driven by Your Organization:

Perform in-depth breed-specific research initiatives driven by existing data and breed club participation

Full ownership of Your Genetic Data:

Breeders have full access to their dogs' raw genetic data and have the freedom to share those data with their breed club or other researchers working on discovery initiatives for their breed

Accurate and Reliable Testing:

Embark's laboratory is CLIA certified, and we are an official research partner of Cornell University College of Veterinary Medicine. We screen 200,000+ genetic markers evenly spaced across the genome, representing significantly more data than other providers. All data are verified and quality checked by a team of geneticists and veterinarians

Working Together to Create a Better Future for Your Breed

"When we set out to improve Doberman Pinscher health and longevity, we knew we needed the best DNA test available and the brightest minds in veterinary genetics."

-- **Sophie Liu, DVM, Co-Founder, Doberman Diversity Project**

"Embark's breed club partnership allows us to compare overall breed population genetic health as well as receiving individual results, we can actually make decisions that will impact the long term health and diversity of Belgian Sheepdogs."

-- **Lorra Miller, President, Belgian Sheepdog Club of America**

The Embark for Breeders Dog DNA test is the most comprehensive on the market. It includes the following:

- Single cheek swab for fast and easy use
- Breed-relevant disease screening
- Physical trait reports
- Reports formatted for OFA submission
- Genetic diversity assessments and COI reports
- Free 1:1 consultations with Embark's in-house geneticists

About Embark

Ending preventable disease in dogs is the core of our mission, and preserving genetic diversity while breeding away from heritable disease is the key to this mission. Every breeder that uses our test and completes the optional health survey information for their dog brings us closer to making that a reality. Embark actively seeks to partner with and support the many breed clubs and health organizations that have spent decades working toward preserving and improving the health of their breeds. Together we can accelerate the pace of discovery and develop new tests to improve dog health.
